Windows 10 Overview Workshop (AIDE)

Course Overview

This specialized one-day workshop provides the knowledge and skills necessary to analyze the latest Windows 10® operating system artefacts, user data and explore the many updates this new Operating System has introduced. During this one-day course, participants will review various Windows 10 features, learn of artefact locations for Microsoft Edge Browser, Cortana, OneDrive, Windows Mail, Notifications and gain an overview of core registry files and new values of forensic interest pertaining to user activity on a Windows 10 system.

Topics Covered

- Windows 10 Overview
 - General overview Windows 10 functionality, focusing on the new artifacts of interest to the forensic examiner.
- System Artifacts
 - Deep dive into core system artefact updates on a standard Windows 10 environment. Attendees will be exposed to changes and updates to the following items:
 - File System
 - Disk Layout
 - Recycle Bin
 - Prefetch compression
- User Artifacts
 - Windows 10 brings many new items of interest to the forensic examiner; this session focuses on new items of interest within the user profile where day to day activity on the host system has occurred. Items to be covered include:
 - Edge Browser structures and artefacts
 - Cortana's interaction with the system and user activity including data files located in the package folder structure.
 - Notifications updates and decompiling of data structures
 - Windows Mail Analysis
 - Registry Updates
